Art Unit: 3765

In accordance with 37 CFR 1.72, the Abstract of the Disclosure must be shortened so as to be less than 150 words.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6, and 16-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Sogard et al. The patent to Sogard et al discloses an implantable medical device comprising a self-supporting structural member 20, Fig. 6 fabricated of a plurality of laminated layers 14, 19 (see col. 10, lines 60-67 and col. 11, lines 1-4) of at least one biocompatible material. Note that the planar sheets 16, Fig. 3 which comprise the layers 14 may be made from a film (see col. 10, lines 2-5). The self-supporting structural member further comprises a stent 10 having a plurality of structural elements. With regard to claim 16 note that a plurality of micro-openings may pass through a wall thickness of each tubular member 14, 19 (see col. 10, lines 1-2 which define the size of these openings as 2 to 10 microns).

Claims 1-5 and 7-13 are rejected under 35 U.S.C. 102(a) as being anticipated by Lentz et al. The patent to Lentz et al discloses an implantable medical device comprising a self-supporting structural member 10, Fig. 1 fabricated of a plurality of

Art Unit: 3765

laminated layers 20, 22, 28 of at least one biocompatible material. The self-supporting structural member further comprises a stent 28 and a graft 25. The stents may be constructed from stainless steel (col. 5, lines 45-49).

Claims 14 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
